Bug Report - RDStation

Below are some bugs I have found in the www.rdstation.com.br.

1) Analisar > Alcance
   If you don't put any date in the interval field, you got a error return.
   Steps for reproduction
   1) Visit www.rdstation.com.br/analise/alcance
   2) In the field Interval select Personalizado
   3) Date field in blank
   4) Click Aplicar
   Expected result:
   A alert saying that the dates have to be fielded
   Real result:
   A page saying that something is wrong.

2) Analisar > Alcance
   If you select the initial date bigger than final date, the search is made.
   Steps for reproduction
   1) Visit www.rdstation.com.br/analise/alcance
   2) In the field Interval select Personalizado
   3) First date field: 13/02/2016
   4) Second date field: 12/02/2016
   5) Click Aplicar
   Expected result:
   A alert saying that the first date must be less than the second date.
   Real result:
   The search is done.

3) Possible improvement: Converter > Campos Personalizados > Criar Novo Campo
   If we have only one button on the page:
   https://www.rdstation.com.br/campos-personalizados, why not put on the same page where we do the register of the personalized field? That would save some time for the user.

4) Converter > Campos Personalizados > Criar Novo Campo
   If you don't fill the fields and click in Salvar e Finalizar, two alerts are displayed, i think only one alert is the correct way.
   Steps for reproduction:
   1) Visit https://www.rdstation.com.br/campos-personalizados
   2) Don't fill any field.
   3) Click in the button Salvar e Finalizar
   4) On the bottom right corner of the page 2 alerts with the same text are displayed.
   Expected Result:
   Only one alert are displayed.
   Real result:
   Two alerts are displayed.
